

In Focus

Alana Stevenson

Teaching Fellow at the National Centre for Prosthetics and Orthotics, University of Strathclyde

What is the best thing about your job?

Being able to meet new students every year and watch them develop their clinical techniques, problem solving skills and confidence around treating patients over four years is very rewarding. Also, the opportunity to work in partnership with charities and other organisations to encourage prosthetic and orthotic service sustainability around the world.

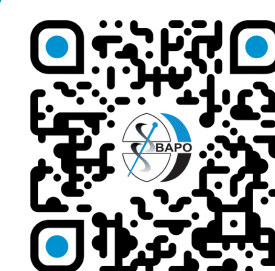

Describe your job in three to five words

Supporting current and future professionals

What advice would you give other people interested in your role?

Always continue to pursue and develop research and professional working relationships both within the prosthetic and orthotic profession, as well as other working professionals such as other health professionals, consultants, organisations, and charities. The profession is strongest as part of a team, whether an multi-disciplinary team or a larger professional working group, which will continue to produce evidence and sustainability for prosthetic and orthotics in the future.
